| Course Unit Title    | SES 512 Renewable Energy I  |
|----------------------|---|
| Programme of study   | MSc in Sustainable Energy Systems (Distance Learning)   |
| Lecturer             | DrIng. Paris A. Fokaides  |
| Type of course unit  | Compulsory  |
| ECTS                 | 5   |
| Year of study:       | 1   |
| Semester(s) offered  | Fall Semester 2015, 2017, 2019  |
| Course content       | <ul> <li>Theory and practice of renewable energy technologies</li> </ul>  |
|                      | <ul> <li>Renewable energy potential analysis</li> </ul>   |
|                      | <ul> <li>Technical, environmental and economic considerations of renewable</li> </ul>   |
|                      | energy technologies applications  |
|                      | <ul> <li>Pre-engineering of renewable energy technologies applications</li> </ul>   |
| Course modules:      | Module 1: Energy conversion principles in renewable energy sources  |
|                      | <ul> <li>Fundamentals of renewable energy applications</li> </ul>   |
|                      | <ul> <li>Different options from renewable heat and power</li> </ul>   |
|                      | <ul> <li>Classification of energy carriers according to degree of conversion</li> </ul>   |
|                      | <ul> <li>Technical key figures of renewables</li> </ul>   |
|                      | Module 2: Solar energy utilization  |
|                      | <ul> <li>Solar thermal utilization principles</li> </ul>  |
|                      | • Technical economic and environmental assessment of solar thermal  |
|                      | technologies  |
|                      | <ul> <li>Solar thermal power production</li> </ul>  |
|                      | <ul> <li>Solar driven electrochemical effects</li> </ul>  |
|                      | <ul> <li>Photolvoltaics technical, economic and environmental assessment</li> </ul>   |
|                      | Module 3: Wind energy utilization   |
|                      | <ul> <li>Wind kinetic energy utilization principles</li> </ul>  |
|                      | <ul> <li>Technical, environmental and economic aspects</li> </ul>   |
|                      | <ul> <li>Different types of wind energy converters</li> </ul>   |
|                      | Module 4: Biomass and biofuels  |
|                      | <ul> <li>Biomass sources and biomass potential</li> </ul>   |
|                      | <ul> <li>Thermochemical and biochemical biomass to biofuel conversion routes</li> </ul>   |
|                      | <ul> <li>Biofuels utilization</li> </ul>  |
|                      | <ul> <li>Biofuels environmental assessment and supply chain considerations</li> </ul>   |
|                      | Module 5: Geothermal energy utilization   |
|                      | <ul> <li>Geothermal utilization principles</li> <li>Technical, environmental and economic assessment aspects of</li> </ul>  |
|                      |   |
|                      | geothermal applications   |
| Textbooks:           | <ul> <li>Comparative assessment of different types of geothermal applications</li> <li>Kaltschmitt, M., Streicher, W., &amp; Wiese, A. (Eds.). (2007). Renewable energy:</li> </ul> |
